

AWARD
Alternative Water Resources and Deliberation process to renew water supply strategic planning

Funded by the European Union

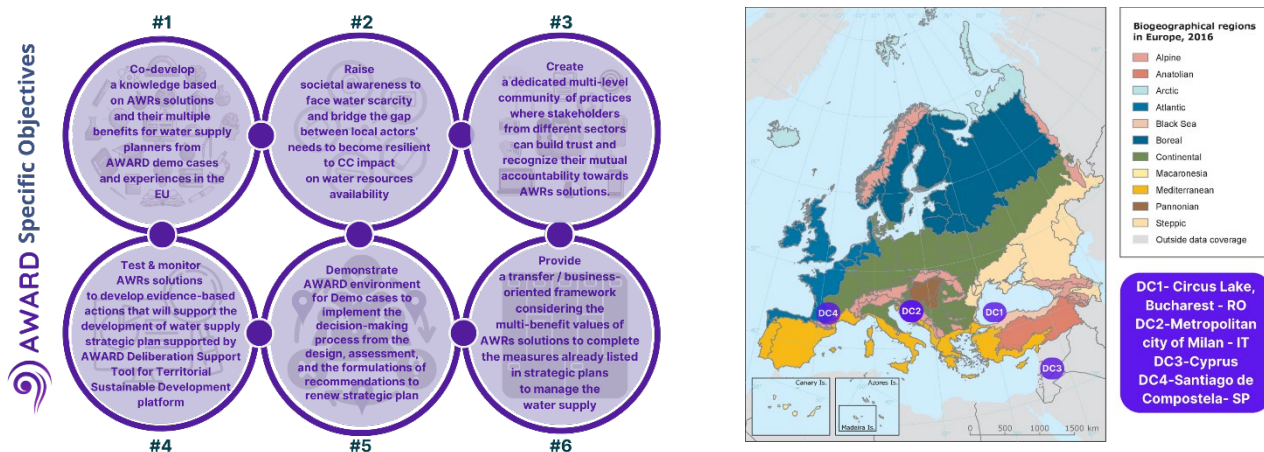

PRESS RELEASE

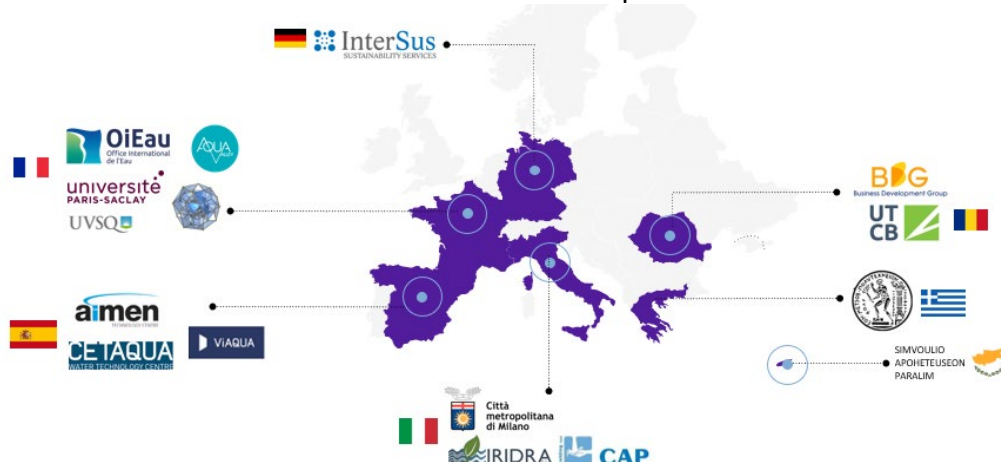

LET'S DISCOVER THE AWARD PROJECT!

9 February 2024

In light of escalating water scarcity and the far-reaching impacts of climate change, AWARD acknowledges the pressing need to actively involve society, science, and policy in the creation of informed knowledge and strategic water planning. The AWARD project is a three-year project funded by the European Commission's Horizon Europe with the objective to provide evidence-based knowledge and lessons learned on the effective integration of affordable, acceptable, and reliable alternative water resources (AWRs) solutions into water supply strategic planning, addressing the impact of global changes. It aims at experimenting AWRs at the local scale in 4 demo cases.

Consortium: The project is coordinated by the International Office for Water France. AWARD brings together 14 beneficiaries and 2 affiliated entities across 7 European countries.
